Briefing for district and block officials and development partners

What the survey is, what we need from you, and how to keep it independent

Independent NDD Coverage Evaluation Survey, Madhya Pradesh, November 2026

AIIMS Bhopal with the medical colleges of Khandwa, Chhindwara, Ratlam and Shahdol · NHM MP · WHO

Drafted with the assistance of Claude (Anthropic); reviewed by the AIIMS Bhopal survey team.

What the survey is

Purpose

- Checks the coverage reported for the October 2026 NDD round (6 October, mop-up 9 October)
- Asks families directly whether each child aged 1–19 was offered and swallowed albendazole
- Also recounts registers at schools and AWCs to see how well reports match records

Method

- WHO coverage evaluation survey method, approved by NHM MP
- Teams from your medical college's Community Medicine department, led by AIIMS Bhopal
- Result for each district: is the reported coverage within the survey's confidence interval?

In your district: 3 blocks, 30 villages or wards

District	Blocks selected (10 clusters each)
Ratlam	Jaora, Sailana, Ratlam
Chhindwara	Tamia, Chaurai, Mohkhed
Shahdol	Beohari, Sohagpur, Burhar
Khandwa	Khalwa, Khandwa, Pandhana

Blocks, then villages and wards, were drawn at random with probability proportionate to population. Nothing was chosen for convenience or performance.

What a team does in one village or ward

1

Arrive

Meets the ASHA or AWW as a guide

2

Map

Sketch map; one segment drawn at random

3

Select

About 38 households by a fixed list

4

Interview

Families of children aged 1–19

5

Verify

Registers at one school and one AWC

One day per village or ward. Teams work in pairs and carry an authorization letter.

What we need from you

Letters	DIO/CMHO letter to BMOs, BEOs and CDPOs of the selected blocks
Vehicles	Mobility support for each pair on each field day
A guide	ASHA or AWW asked to show the team round the village, then leave
Records kept as they are	NDD registers and the retained copy of the reporting form at every school and AWC
Sample tablets	A few albendazole 400 mg tablets for each pair to show families
Contact person	One person per block the team can call

Keeping the survey independent

Please do

- Tell blocks the next day's village only when the team asks, the day before
- Let the team work alone with families
- Show registers and reports exactly as they are

Please do not

- Inform villages or families in advance, or brief them on answers
- Accompany teams into households or sit in on record checks
- Complete, correct or re-tick registers now
- Ask teams for household data or interim results

Development partners: a clear role

Welcome

- Logistics: vehicles, routes, contacts
- Introductions at district and block level
- Receiving the State-level results after analysis

Not part of the survey

- Accompanying teams in villages, households, schools or AWCs
- Observing interviews or recounts
- Receiving cluster lists in advance or household data

Evidence Action and Nutrition International support NDD delivery; the survey measures that delivery, so it must be done without them in the room.

Timeline

[dd Nov]	[dd Nov]	[dd Nov]	[dd Nov]	[dd Dec]
Training of teams	Phase 1 field work begins	Phase 2 clusters released	Field work ends	Results to NHM MP and WHO

Dates to be confirmed by NHM MP and AIIMS Bhopal.

Results and contacts

Results

- Analysed by AIIMS Bhopal and shared with NHM MP and WHO
- District-level estimates, not individual schools, AWCs or workers
- A district debrief after the State report

Contacts

- District nodal officer: Community Medicine department, your medical college
- AIIMS survey coordinator: [name, phone]
